

Tokai RVM

Khulna, Rajshahi, BD

Industry: Environmental and Green Startup Industry (if Other)

Startup stage: Ideation

Startup's Purpose & Vision

We're visionary engineers and environmentalists with a mission to reduce plastic waste, promote recycling, and drive positive change. Our incentive-driven business model aims to clean the environment and shift consumer perspectives. We envision establishing a low-cost Reverse Vending Machine (RVM) chain across Bangladesh, connecting with Sustainable Development Goals (SDGs), and later expanding to other developing countries.

Problem

People lack motivation to properly dispose of their plastic bottles in bins, leading to the mixing of 100% recyclable PET and PP plastics with organic waste. This mixing raises the cost of Solid Waste Management. Also, The environment is being polluted with plastic wastes.

Solution

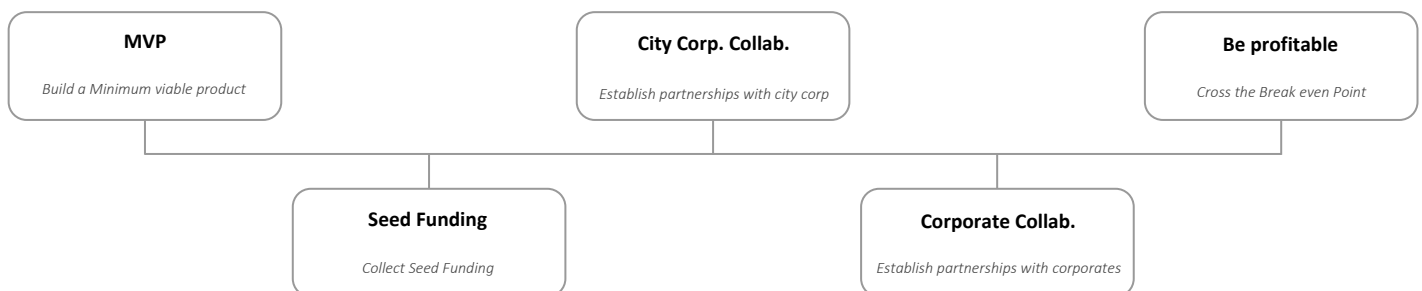

Tokai, a specialized Reverse Vending Machine for developing countries like Bangladesh, accepts used plastic bottles from consumers and rewards them with tokens or app redeemable credits. It shreds and stores the plastics, and makes them recycle ready. The app works as an incentive providing platform.

Business Model

The business operates on a B2B2C model. We will make this RVM machine in low cost and rent to the businesses, for example universities, supershops and other organizations. They will receive percentages from the collected plastics. These machines intake the bottles, and shred them and make them recycle ready. After selling them to the recycler, our business will earn. Moreover, the body of the RVM will perform as an advertising platform.

Startups Milestones

Mention 5 milestones your startup would like to achieve by 2030.

Competitive Landscape

In this region, the RVM industry lacks competition. Coca-Cola and Unilever encountered difficulties, mainly stemming from high import costs and reliance on foreign tech. Tokai seeks to pioneer with cost-effective & human-centric innovative design.

SUSTAINABLE DEVELOPMENT GOALS

Tokai of Team Procritic aims to address and contribute to the interconnected goals of UN Sustainable Development Goals (SDGs) 9, 11, 13, and 17.
